Executive Department

Baton Rouge

Sam H. Jones
Governor

EXECUTIVE ORDER NO. 8 (d) of 1940

Date: February 28, 1941

Subject: Placing Act 47 of 1940 in Effect as to the Transfer of Functions of Certain Other Agencies to the Department of Institutions.

It is hereby ordered that the provisions of Act 47 of 1940, which established a new Department of Institutions, be placed in full effect as to the transfer of the following named agency, from the date of this order, which transfer is covered by Section 2 of Title XVI of the Act:

The Board of Administrators of the Charity Hospital
of New Orleans.

All other provisions of the Act shall be fully operative to the extent that they relate to the agencies and functions herein specified. In particular, the provisions of the following named sections of Title XXV of the Act shall be given effect in connection with the transfers specified in this order:

- Section 1. Relating to transfers of functions.
- Section 2. Relating to transfers of records, money, and other property.
- Section 3. Relating to transfers of employees.
- Section 4. Relating to transfers of appropriations.

This order is issued on the recommendation of the Director of Finance, approved by the Board of Finance, in pursuance of the Provisions of Section 8 of Title XXV of the Act. It is hereby declared that all the necessary provisions have been made for placing the provisions of the Act in full effect as to the agencies and functions specified in the order.

MARC M. MOUTON

Lieutenant Governor and
Acting Governor of Louisiana

Received and filed February 28th, 1941 9:45 A.M.

H. C. CORMISH

Assistant Secretary of State

THE REORGANIZATION ACT

Act # 47 of 1940

Section 5

Extract

*****The Board of Administrators of the Charity Hospital of New Orleans shall continue as heretofore existing with all powers, authority, and responsibility necessary to satisfy any requirements of law resulting from the existence of any contract obligations of the State of Louisiana or the Board of Administrators of the Charity Hospital of New Orleans arising from any statute, or contract authorized, thereby, and with all powers, authority, and responsibility necessary to enable it to administer, in accordance with the conditions imposed, any property or fund vested in the Charity Hospital of New Orleans or the Board of Administrators thereof by way of gift, donation, deed, will, trust, or other instrument, where such administration is necessary to the continued legal validity or effectiveness of any such gift, donation, deed, will, trust, or other instrument, otherwise the Board of Administrators shall be subject to all of the applicable provisions of this Act relating to advisory committees.

DEPARTMENT OF PATHOLOGY

July 19, 1941.

To the Board of Administrators and
Doctor O. P. Daly, Superintendent
Charity Hospital of Louisiana at
New Orleans, Louisiana.

Gentlemen:

I hereby submit the annual report of the Department of Pathology of Charity Hospital at New Orleans, for the year closing June 30th, 1941.

I wish to take this opportunity to express my appreciation for the cooperation which I have received from the Administrative Authorities of the hospital.

I further wish to express my appreciation to the Visiting Pathologists and Scientists of Tulane University School of Medicine and Louisiana State University School of Medicine.

I am deeply grateful to my own professional, secretarial and technical staff for their loyalty and assistance during the past year.

Very sincerely,

EMMA S. MOSS, M. D.,
Director.

NUMERICAL ANALYSIS OF TESTS PERFORMED BY THE DEPARTMENT OF PATHOLOGY AND DIAGNOSTIC LABORATORIES

For the Period July 1, 1940-June 30, 1941

1. DIVISION OF DIAGNOSTIC LABORATORIES:

Serology.....	285,166	
Parasitology.....	16,754	
Out-Patient Clinic Laboratory (white).....	34,403*	
Out-Patient Clinic Laboratory (colored).....	61,349	
Biochemistry.....	51,738	
Histopathological preparations.....	50,356	
Hematology.....	8,201	
Basal Metabolic Laboratory.....	4,969	
Venereal Diagnostic Laboratory.....	4,634	
Friedman Laboratory.....	155	
Central Laboratory, Tuberculosis Unit.....	3,564**	
Bacteriology and Central Laboratory for Contagious Unit.....	31,130***	
	552,454	552,454

2. PASTEUR INSTITUTE:

Pasteur Treatments administered.....	1,932	
Animal Brains examined.....	147	
Letters and Telegrams sent in reference to animal brain examinations.....	210	
	2,289	2,289

Number of patients under observation who did not require treatment.....1156

3. SURGICAL PATHOLOGY AND PATHOLOGIC ANATOMY:

Surgical specimens.....	11,503	
Autopsies.....	1,219	
Autopsy protocols completed.....	1,219	
	13,941	13,941
GRAND TOTAL.....		568,684

*This laboratory was opened in September of 1940 at the time of opening of the white clinics.

**This laboratory was opened in November of 1940 in order to render more competent and efficient service to the patients in the Tuberculosis Unit.

***The Central Laboratory for the Contagious Unit was opened in November of 1940 in order to render more rapid diagnoses as well as more competent diagnoses for the patients in this unit.

JULY 1, 1940 through JUNE 30, 1941:

Number of deaths including stillborns.....	3,148
Number of Coroner's cases not including stillborns.....	865
Coroner's cases autopsied by hospital, not including stillborns.....	187
Bodies assigned to Anatomy:	
Tulane, L. S. U., Loyola.....	123
Bodies available for autopsy.....	2,347
Autopsies performed.....	1,224— 52.2%
Actual number of tests show a 28.5% increase over the year 1939-40.	

Beginning in November of 1940 the Director of the Department of Pathology interviewed the various undertakers in the City of New Orleans relative to the situation existing in Charity Hospital concerning the Official Undertaker, which resulted in the formulation of a plan that Charity Hospital would dispense with the services of the Official Undertaker and would handle the reporting of deaths by the hospital officials. This plan has so far proven most satisfactory. The undertakers have been cooperative in securing autopsies and no difficulties have been experienced in the disposal of bodies to be buried by Charity Hospital.

DEPARTMENT OF ALLERGY

June 30, 1941

To the Board of Administration
Charity Hospital
New Orleans, La.

Gentlemen:

I beg to submit this my report of the work done in the Allergy clinic of the Charity Hospital during the fiscal year 1940-41; from July 1st to June 30th, 1941 we treated 11,606 patients distributed as follows: white 7300, colored 4306; 52 new patients applied for treatment and 1/4 of the total were Allergic sufferers referred to us for diagnosis and treatment by the other departments, principally from the Medical & Skin Services.

We noticed gratifying results from non-specific dust antigens in the perennial asthma cases; the patients who presented marked seasonal sensitization and who were refractory to the usual methods, were benefited in a marked degree by high doses of the specific antigen.

I wish to thank Drs. Ogden & Shushan for their valuable assistance; also Mr. A. Lauve, our Druggist; and the Lafayette Pharmaceutical Co. Parke Davis & Co. & Sharpe & Dohme for their generous cooperation.

Respectfully submitted,

NARCISSE FRANCIS THIBERGE, M. D., PHB
Chief Department of Allergy.

REPORT OF THE DEPARTMENT OF ANESTHESIA

July 1, 1940 thru June 30, 1941

To the Director and the Board of Administrators,
Charity Hospital of Louisiana at New Orleans.

Gentlemen:

The annual report of the Department of Anesthesia for the year ending June 30, 1941 is hereby submitted.

The year 1940-41 has seen a number of changes in this department. Prior to March, 1941 the department was partly administered by Miss Lillian M. Gebs who was in charge of anesthesia in the general operating unit and partly by Miss Mary Koenig who was in charge of anesthesia and analgesia in the obstetrical unit. Fifteen additional graduate nurse technicians were employed to administer anesthetics throughout the entire hospital. In view of the fact that technicians are on an eight-hour schedule and that as many as eighteen anesthetists may be required at any one single time in the general operating rooms, these technicians are supplemented by student technician anesthetists from the School of Anesthesia for Nurses. The graduate technicians, therefore, have greater responsibility than they would ordinarily have as they act as supervisors for these students. Miss Lillian M. Gebs, who likewise is Acting Director of the School of Anesthesia for Nurses, has had the direct responsibility of these students. Until March 1, the department of anesthesia had been under the medical supervision of Dr. C. B. Odom, Associate Director of the hospital. A full time medical director, certified by the American Board of Anesthesiology as a qualified specialist in anesthesia, assumed charge of the department March 1, after his formal appointment February 7, 1941 by the Board of Administrators. There have been no radical departures from the previous organization since his inception of duties. The Inhalation Therapy Department, under the medical supervision of Dr. J. O. Weilbaeher, Jr., Acting Director of the hospital, was merged with the anesthesia department during the latter part of June. Both departments consolidated as one department, will now be financed from the same budget. In view of similarity of equipment and the similarity of the physiological and medical aspects of inhalation therapy to anesthesia, and the fact that it is customary for anesthesia departments to include inhalation therapy in their organization, this merging is, of course, logical and desired. This department was administered by Miss Esther Myers, who in addition to having the faculty position of Director of Education in the School of Anesthesia for Nurses, held the title of Chief Gas Therapist. Five technical orderlies attend to details of moving tanks, insertion of catheters, and caring for equipment.

The present arrangement of personnel is as follows:

The staff of technician anesthetists was decreased by two March 15. Miss Gebs is the assistant to the director. In her charge are the graduate technician anesthetists assigned to the general operating unit, the student technician anesthetists assigned to the general operating, obstetrical and accident units and inhalation therapy. Miss Koenig acts as an assistant to the director and supervises the obstetrical anesthesia and analgesia and the equipment in that unit. Miss Esther Myers likewise acts as an assistant to the director and supervises the inhalation therapy department technicians and equipment and duties of technician student anesthetists assigned to inhalation therapy by Miss Gebs. All requisitions for supplies, equipment and repairs are approved through the office of the director and are no longer made individually by the acting head of each unit acting independently of the other as has been practiced in the past. The replacement of personnel likewise is under the jurisdiction of the director instead of the heads of these subdivided units as was also formerly the case. Inasmuch as the majority of the staff is composed of

members of the nursing profession who instruct students enrolled in the School of Nursing and have various social and other contacts with the remainder of the nursing staff of the hospital, and that specific moral, educational and physical standards are maintained by the department of nursing, all replacements of and supervisor technician anesthetists is by mutual agreement and to the satisfaction of both the director of the school of nursing and the director of the department of anesthesia.

There is sufficient equipment for the requirements of the department for the coming year. Generally, the equipment is in good repair considering its repeated use by numerous inexperienced students who are learning the techniques and art of anesthesia. Inasmuch as the majority of the machines are comparatively new and there have been few innovations or radical changes in machine design in the past year, the equipment is the most modern available. With the completion of repairs of the needle valves on six gas machines of the "wet flow meter" type, all the equipment will be in good working condition. Rubber washers, fittings, valves and other small parts undergo constant deterioration or wear and must be replaced from time to time.

The medical aspects of anesthesia are undergoing some change also. These are, of course, slow, as such improvements result from development of an educational program for those who have direct or indirect contact with the department of anesthesia. Interns have now been added to the staff who rotate through the department for one month and are allowed to administer all types of anesthesia. The purpose is not to train these men to be expert anesthetists, but rather to acquaint them with the problems and complications of anesthesia and to familiarize them with the simpler methods of administration of these drugs so that they will be better equipped to cope with problems which frequently arise when one is in the position of a surgeon and is wholly responsible for the life of a patient. It has been gratifying to observe the enthusiasm and interest of these interns so assigned and it is hoped the practice of assigning them will continue since they have been of great assistance to the department. Their work is supervised as much as possible by the director and is supplemented by short conferences. A series of a dozen lectures on the general phases of anesthesia designed for the intern and resident staff was presented evenings so all could be present and was well attended. A syllabus of procedures on various phases and types of anesthesia, inhalation therapy, and resuscitation has been prepared by the director and will be multigraphed. It is hoped that by its use by members of the anesthesia department not only will all procedures be standardized, but equipment will be better maintained and a saving afforded on gases and drugs.

There is an urgent need for suction appliances which can be immediately available to the anesthetist on those occasions when regurgitation, vomiting and excess mucous complicate the anesthesia. This is essential to prevent aspiration of foreign materials into the bronchi and lower respiratory tract. The gravest and most frequent accidents of anesthesia and some of the most severe post-operative complications following anesthesia are from this cause.

The salaries of orderlies who act as technicians in the department of inhalation therapy should be raised above those of other orderlies in view of the fact the duties these men perform border on therapy and require some special training and knowledge of a technical nature. The salaries of the nurse technician anesthetists should be maintained above those of graduate nurses who confine their activities to nursing because they, too, have had additional training and because of added skill and responsibility in execution of their duties.

The department is now in a position to offer to properly qualified graduates in medicine who have completed one or more years internship who wish to specialize in anesthesia opportunities for post-graduate training in all aspects of inhalation, regional, and intravenous anesthesia, inhalation therapy, and research. Those interested in such training would be appointed as residents and be subject to the regulations governing all other residents in the hospital.

The following is a tabulation of anesthetics administered by the anesthesia department throughout the hospital from July 1, 1940 through June 30, 1941.

REPORT OF THE MEDICAL SOCIAL SERVICE

DEPARTMENT

To the Board of Administrators and Dr. O. P. Daly, Superintendent of Charity Hospital of Louisiana at New Orleans.

Gentlemen:

Herewith is presented the annual report of the Medical Social Service Department for the fiscal year beginning July 1, 1940 and ending June 30, 1941.

This report is taken largely from five reports made by the former director to the Superintendent during the year. However, some of the material has been derived from the acting director's knowledge of and participation in the Department's work as supervisor until June 15, 1941, when she was appointed acting director.

Function

The primary function of the Medical Social Service Department is to work with the hospital staff in furthering the Medical treatment of the patient. The doctor, the nurse, and the social worker represent three professional groups within the hospital whose common interest is the medical care of the patient. The Medical Social Worker especially helps the hospital to individualize its patients in working out the treatment plans which best fit the needs of the particular patient. She is able to provide information about the patient's home and family, about the problems associated with his illness and about the agencies and resources there are to help him carry out treatment for himself and his family. Such information helps the doctor and the hospital to better understand the patient. With her knowledge and understanding of health problems and the social factors involved, the worker is able to explain to the patient his condition and to help him understand the treatment and the need for following it. When he is unable to meet the burden of illness without help, the worker is able to coordinate the services of the various health and social agencies as well as the family and interested individuals in his community, by explaining his medical-social problems. In the whole process, the worker has been able to interpret to the hospital some of the social services of the state, and to point out the gaps or lacks in resources for carrying out proper treatment. She has also fostered a better understanding and use of the hospital facilities through her work with the patient and the community in explaining the function, policies and procedures of the institution.

Organization

The Department is set up on the plan of a main or in-patient division, a clinic division, and an admitting division. There are five separate units or offices in the clinic division, and five in the admitting division, making a total of eleven social service units in the hospital. While decentralization gives rise to problems in departmental administration, such organization is in line with the best practice, as it affords closer integration of the worker and the hospital service to which she is assigned.

Staff

Social workers and clerical workers were added to the staff when the white clinic section and the colored admitting and accident sections were opened in September. In January, 1941, there was a staff of thirty-five social workers, the largest staff in the history of the department. However, in the face of reduced hospital appropriation, replacement of

workers who resigned was not possible. Since we had thus expanded our function, along with the expansion of the hospital's medical care program, it was necessary to meet the staff reduction by increasing the services of the remaining number of workers. As complete coverage of all services in the hospital has always been required, this reduction in staff meant "spreading thin".

The present staff consists of the director, three supervisors in the in-patient division, one supervisor in the clinic division, one supervisor in the admitting division, and twenty-four medical social workers. There are five interviewers, who are semi-professional workers, and a clerical staff of fifteen, including a bookkeeper and a chauffeur. This clerical staff is responsible for handling the clerical and intake work of the eleven units throughout the hospital. The total staff in the Department is fifty.

While we are reorganizing the present staff of twenty-four medical social workers in order to cover every service, we are finding it necessary to discontinue some of the "specialized" services. For example, the worker who was formerly responsible for diabetic clinic and all diabetic patients in the hospital, is now responsible for this clinic service plus cardiac clinic and the white and colored female surgical wards. We hope that we will be able to enlarge the staff in the future, in line with a well-organized staff function and program. For the present, we are making every effort to give a maximum of service, in cooperation with the economic measures in effect throughout the hospital.

We are particularly fortunate in having a well-rounded staff. The workers are alumnae of such outstanding schools of social work as Tulane University, University of Chicago, Columbia University, Washington University, University of Minnesota, Smith, Simmons College, William and Mary College, and the Catholic University of America. Our workers have had invaluable experience in other fields of social work both in Louisiana and other parts of the country, such as public welfare administration, child welfare work, family service, W.P.A., state crippled children, and prevention of blindness programs.

Standards

The Department meets the requirements for membership in the American Association of Medical Social Workers by having professionally trained workers who carry on a high standard of work. The administrators of the hospital and of the Department of Institutions have been interested in maintaining the high standards of work and of personnel in the department.

The department serves as a medical-social training center in connection with the Tulane University School of Social Work. We recognize the importance of participating in such a program, particularly in view of the increasing demand for qualified medical social workers. The hospital and the Department also offer opportunity for a well-rounded experience to the trained worker who will go on to jobs in other state hospitals and in other federal and state programs throughout the country. We are particularly fortunate in being able to offer training and experience in the semi-administrative job, in view of the increasing demand for medical social workers in the administration of related programs, such as Crippled Children's Program, Public Assistance, etc.

Education

Besides providing training facilities for the Tulane School of Social Work students, the Department participates in the educational programs of the Charity Hospital School of Nursing and the L.S.U. Medical Center.

One of the supervisors conducts classes in the nursing school on "Current Social Problems" and "Introductory Sociology". Also there are informal discussion groups of workers, nurses, and dieticians. Some of the workers have had the opportunity to talk to classes of nurses and dieticians on medical-social problems in special services and in relation to certain diseases.

The director of the Department has given a course of lectures to the senior L.S.U. students on "Social Medicine", and the more experienced workers in the Department have assisted by supervising the students' work on actual cases presenting medical-social problems. This program, however, was discontinued in May, 1941, because of changes in the curriculum of the senior class, made in line with defense activities.

Educational Secretary

In October, 1940, a part-time Educational-Secretary was added to the staff to direct and promote general staff participation and development. She served as consultant on problems and development of individual workers and their services as well as correlator of the work of the staff committees. Highly qualified in training and experience, she was invaluable in helping analyze our problems in the actual jobs and in organizing our general departmental program more effectively. We regret that we will be unable to have the help of an Educational Secretary this year, because of a limited hospital budget.

Social Service Program in Admitting Department

On January 29, 1940, at the request of the Hospital Director, a social worker was assigned to the Admitting and Accident Rooms. When the colored Admitting and Accident Rooms were opened in September, 1940, a second worker was added. It is believed that the development of a social service program in the Admitting Department has greatly helped to relieve the problem of admitting chronic cases, non-residents, boarders, etc., who applied and who, though not in need of hospitalization, had become stranded. Through community and state resources and some privately developed resources, most of these patients have been adequately planned for outside the hospital.

To our knowledge, other hospitals throughout the country, comparable to Charity in function and size, do not have a similar service. We believe that it is of particular significance in the development of hospital administration that Charity has assumed some responsibility for those patients who apply and who are rejected for medical care.

Social Admitting

For many years the hospital administrators and the public have been concerned over the amount of abuse at Charity Hospital and over the fact that there has been no adequate set-up for determining eligibility. Considerable research and study of methods for determining eligibility purpose, function and size, have been done. However, it was realized that this hospital is unique from many aspects, and that the total problem as well as the working details and the staff required, could not be determined before a plan was tried. Accordingly, the hospital director authorized the setting-up of a skeletal staff of 2-8-41 for studying and evaluating the problem. It was hoped that this set-up would form the nucleus for the ultimate plan, which would presuppose some uniform organization for the patients throughout the other parishes for determining eligibility before the patients come to the hospital.

On 2-8-41 four qualified interviewers, under the supervision of Social Service, began interviewing white Orleans Parish patients who

were referred for admission during office hours. It is interesting that from this time until 3-17-41, all patients referred were found to be eligible for free hospital care except about three percent (3%). Of interest also, is the fact that in a similar study in the Accident Department made by the Medical-Social Supervisor, about fifty per cent (50%) of the patients applying were either ineligible for free care or were able to arrange for treatment elsewhere. While definite conclusions could not be drawn from this short period of study, the knowledge of the problems and procedures we had derived from our experience, greatly facilitated the setting up of the Admissions Unit on 3-17-41, when the Department of Public Welfare became responsible for certification under the Reorganization Act.

Certification of Eligibility for Hospitalization—Admissions Unit

The staff of four interviewers, originally employed to work in the social admitting program became the Staff of Admissions Unit in March 1941, when the hospital was placed under the Department of Institutions. The Reorganization Act provided that Department of Public Welfare certify all patients for admission to Charity Hospital, and as medical social workers could not be added to the staff to work out the hospital part in handling emergency admissions, the interviewers, working under the supervision of Social Service, assumed this responsibility.

Besides the actual handling of the forms on both previously certified and emergency admissions, this unit is in position to and does render other services to the hospital. The interviewers check return transportation plans of the patients and refer problems to the ward social workers. They recognize other social problems on admission of the patients and refer the cases to the ward workers so that planning can begin immediately. They follow-up non-residents admitted as emergencies so that discharge can be made as soon as the emergency stage is passed. Veterans, enlisted men, compensation cases, et cetera, who are admitted as emergencies and who can be transferred to other hospitals, are followed up until transfer is made. The interviewers also function as interpreters of the certification program and procedures to patients and to the hospital and to the community and also as interpreters of individual health problems, costs, length of treatment, et cetera, to the parish Departments of Public Welfare.

Coordinating Committee of Social Service Department and Department of Public Welfare

Under the attorney general's interpretation of the Reorganization Act, the Department of Public Welfare was charged with the dual responsibility of certifying all patients for hospitalization and of assisting discharge plans for patients in the hospital. This meant that the Social Service Department and the Department of Public Welfare would work cooperatively on many cases. A coordinating committee was formed with representatives from the two agencies in Orleans Parish and from the state offices. We have met every two weeks since 3/17/41, and these meetings are proving to be mutually helpful.

Demonstration Unit

In March, 1941, at the request of the Acting Director of the Hospital a project was begun to demonstrate the value of Social Service in a hospital unit small enough to allow 100% patient-contact. It was believed that on the Medical and Surgical Wards, where there is rapid turnover of patients who present many discharge problems, the service could be most effectively demonstrated. There was no increase in staff, but the workers were taken off other services and added to the four already in Medicine and Surgery, and their desks were moved to the wards.

remaining workers on the staff agreed to double-up for the three months period. Unfortunately, the project was discontinued after two months, due to a shortage of workers.

The opinions of the workers who participated in this project and the statements of several doctors and nurses with whom they worked during this period were that there was less delay in the discharge of patients and that post-hospital care was more adequately planned than previously. Response was particularly favorable to having the workers' Service on the wards as one factor in the closer integration of Social Service with the wards' activities.

Volunteer Service

In past years, Social Service has been able to utilize the services of volunteers in carrying out certain aspects of the work. In July, 1940, however, the volunteer program was set up on an organized basis, and a worker was made Chairman of the Volunteer Committee. Through the Volunteer Service Bureau of the Council of Social Agencies, this worker arranged for the placement of a total of 39 volunteers in the hospital during the year. Supervision of the individual volunteer was given by the worker on whose service she was assigned. The work of the volunteer group proved to be very valuable to the department and to the hospital. However, the Chairman found the program very time-consuming, and it is doubtful, in view of a reduced staff, that the department will be able to carry on an organized volunteer program this year.

Recommendations

We wish to make the following recommendations:

1. A larger staff of social workers and clerical workers would enable us to more adequately cover the hospital, thereby giving service to a greater number of patients in the furthering of their medical care.
2. The employment of an educational secretary is important to a professional department this size. The members of the staff who participate in the programs for training social workers, medical students and nurses, also have full-time jobs in the department. They are therefore unable to "keep up" with current publications and practices in these fields without the assistance of the educational secretary to whom such duties are assigned.
3. A Statistical Department at the hospital would make it possible for the various departments to keep their statistics on a more comparable and meaningful basis.

Acknowledgments

The Social Service Department wishes to express appreciation to the Director of the Hospital and to the other Hospital Administrators for their interest. Gratitude is extended to the Sisters of Charity and to all hospital departments for their continued assistance and cooperation. Special acknowledgment is made to the State and Local Departments of Public Welfare, to the various social agencies throughout the State and to the volunteers for their help in our program. Appreciation is extended to the Supervisors and to members of the Social Service staff who have worked faithfully and loyally throughout the year.

Respectfully submitted,
MYRA LONG RICHARDS,
Acting Director
Medical Social Service Department.

REPORT OF THE NURSING DEPARTMENT

To the Board of Administrators and Doctor O. P. Daly, Superintendent
Charity Hospital of Louisiana at New Orleans

Gentlemen:

The annual report of the Nursing Department for the fiscal year from July 1, 1940, to June 30, 1941 is herewith presented.

The Nursing Department has just completed a year of intensive effort and struggle to fulfil its two major functions: namely, to provide nursing care to patients and to maintain acceptable standards of nursing education for the students enrolled in the School of Nursing. In reviewing the work of the past year, and particularly that of the past few months, it is impossible to overlook the effects of the great movement toward national defense which has been sharply reflected in the records of our department and which overshadows all plans for the future. The threshold of the new fiscal year therefore finds us laying careful plans for a national emergency which has already had a vital effect on our civilian hospitals.

ORGANIZATION WITHIN THE NURSING DEPARTMENT

The organization of the Nursing Department was thoroughly reviewed during the past year with representatives of the Governor's reorganization staff. A major change in our department has been the establishment of the Housekeeping Department as a separate department from Nursing. The Linen and Sewing Rooms, formerly a part of the Nursing Department, were also absorbed by the Housekeeping Department.

The Nursing Department therefore includes at the present time the Nursing Service Division and the School of Nursing. All those who provide nursing care to patients in the Hospital and in the Out-Patient Department, the central service units, and the admission baths and patients' clothes rooms combine to form the Nursing Service Division. Gas Therapy, which was formerly a unit of Nursing Service, was transferred to the Department of Anesthesia during the past year.

The School of Nursing includes students enrolled in our own school, affiliating and postgraduate students, and student anesthetists enrolled in the School of Anesthesia, which still remains a division of the School of Nursing.

In order to facilitate the work of the Nursing Department during the past year, much responsibility was placed on two Councils composed of members of our administrative and faculty group. These Councils served as policy making bodies and as mediums through which major problems might be solved. The Council on Nursing Service worked chiefly through the following committees: Graduate Nurse Personnel, Ward Administration, Subsidiary Workers, and Staff Education. The Council on Nursing School Administration functioned largely through its committees which were named as follows: Admissions, Curriculum, Health, Clinical Instruction, Student Welfare, and Records.

IMPORTANT ACTIVITIES IN NURSING SERVICE DIVISION

Increased Appropriation

The annual report of 1940 lists a number of outstanding problems facing the Nursing Department. Chief among these was the need for an increased staff of nurses. The critical situation facing the Nursing Service Division was clearly represented to the special committee appointed

by Governor Jones to investigate Charity Hospital. A study had revealed that 460 additional nurses were needed to provide a minimum quota of two hours of nursing care per patient, which is an acceptable standard.

We gratefully acknowledge the action of the Board of Administrators who, in July, granted to the Nursing Department an increased budget and authorization to employ as many nurses as were needed. Immediate efforts were made to secure these additional nurses by writing to nursing bureaus and to schools of nursing throughout the country asking them to assist us in securing nurses. Permission was also granted by the Board of Administrators to increase the faculty of the Nursing School.

The increased appropriation permitted the establishment of a salary scale for nurses, and this was made effective on July 1, 1940. The beginning salary for general staff nurses was set at \$75.00 monthly, with promise of a raise after six months of satisfactory service. Many letters were received from superintendents of nurses to whom we had written for staff nurses stating that our salary scale was too low to entice nurses to come south. In November, therefore, we requested and secured permission from the Board to increase all salaries in the amount of \$10.00. This established our beginning salary at \$85.00 a month. This increase in beginning wage and promise of promotion brought in many applications, and our nursing staff increased from 385 graduate nurses on July 1, 1940 to 601 in May, 1941. The pressure under which nurses worked in the hospital divisions was greatly lessened by the addition of these nurses and the morale of the entire group was raised.

Effects of National Defense Program

The demand for graduate nurses in the national defense program began to be felt in the Nursing Department in June of 1941 when a total of 45 resignations were accepted. While many nurses are resigning to accept Army or Navy positions, many others are leaving to secure better positions elsewhere. Due to the shortage of nurses throughout the country, salaries are increasing and we are at present finding it impossible to replace the nurses as they resign.

Salary Scale for Clerical and Subsidiary Personnel

A salary scale for clerical workers and subsidiary personnel was requested at various times throughout the year, and we regret that it has not been possible to grant raises and to establish a fair minimum wage for these groups. Female subsidiary personnel are still receiving a monthly salary of \$30.00 which makes it almost impossible to retain a stable staff of white employees.

Equipment

Another outstanding need listed in last year's annual report was that of lacking equipment. Many supplies and needed appliances were secured which have lightened the work of our nurses; much needed equipment is still lacking, however, which we hope to see provided in the near future. Foremost among these and one which is essential for good nursing care is a properly equipped premature infant unit. Cubicles for our Pediatric wards are likewise needed to provide proper isolation facilities, and screening facilities for all wards in the hospital are an outstanding need.

Staff Education Program

A staff education program for graduate nurses was carried on throughout the year, the main objective being to improve the quality of nursing care of our patients through better supervision. All supervisors and head nurses attended classes in Nursing Supervision and Management of Nursing Units during the first semester and in Hospital Nursing

Service Relationships during the second. In addition, the Supervisors and their Assistants attended a class in Ward Teaching during the second semester. One of the outcomes of the last named course was the establishment of clinical teaching programs in most of the divisions of the hospital. A refresher course was also organized and taught four times during the year for the benefit of new nurses appointed to the staff. Procedure books are now being written for the special divisions which will lay down uniform technics for nursing in such divisions as orthopedics and fracture, eye, ear, nose, and throat, and other specialties.

Health Unit

The health needs of the subsidiary personnel have been more adequately met during the past year through the establishment of the health unit which was set up in the Out-Patient Department. The unit arranges for physical examinations on all new employees and for needed medical services on all subsidiary personnel.

SCHOOL OF NURSING

Through the generosity of the Board in permitting us to add faculty members, the School of Nursing has made notable improvement this past year. The addition of a Science Instructor to coordinate the teaching of the sciences in the Louisiana State University School of Medicine, and the assignment of additional Instructors to assist in the teaching of the Nursing Arts course greatly contributed to a better program for our students. A Public Health Nurse was employed to conduct a teaching program for student nurses in the Out-Patient Department and to direct their activities in Community Nursing. This program replaces the affiliation formerly carried on with the New Orleans Child Welfare and Community Health Association. A Teaching Supervisor was also secured for the Medical Division this year. In adding these faculty members it was possible to introduce many new courses into the curriculum.

University courses leading to the Bachelor of Science Degree in Nursing Education continue to be taught through the Medical School of the Louisiana State University. Our own faculty is now capable of teaching these courses and of offering the practice teaching which is being carried on for the benefit of potential instructors. Clinical Teaching has been emphasized this past year in our staff education program, and our students are now receiving the benefit of well integrated ward teaching programs in many divisions of the hospital.

Postgraduate students are still accepted for supplementary work in nursing, for operating room technic, and for Anesthesia.

Statistics

On July 1, 1941, a total of 263 students are enrolled in the School of Nursing. Of this number, 185 are Charity Hospital students, 47 are affiliating students, 10 are postgraduate students in the supplementary course and in operating room technic, and 21 are anesthesia students. Twelve students are enrolled in the combined academic and basic professional course, or five year degree course.

Ninety-nine students were admitted in September of 1940, and 91 students were graduated in May of 1941. From July 1940 to July 1941 91 students withdrew from the School.

At present, affiliation is maintained with eleven schools of nursing, two in the state and nine out of the state. Three applications for affiliation are pending at the present time.

RECOMMENDATIONS FOR THE NURSING DEPARTMENT

We wish to make the following recommendations at this time:

1. An adequate budget for the nursing Department which will permit of the following:
 - (a) Continuance of the salary scale for nurses.
 - (b) Employment of additional nurses, when available, to provide more adequate nursing care to patients.
 - (c) Employment of additional faculty members.
 - (d) Employment of additional subsidiary workers and the establishment of a salary scale for this group of personnel.
2. Additional equipment for the new hospital, especially a properly equipped unit for premature infants, cubicle partitions on the pediatric divisions, and screening facilities for the wards.
3. The immediate installation of a Diet Laboratory for the School of Nursing.

ACKNOWLEDGMENTS

Acknowledgment is gratefully made to the Administrators, and to the Director of the Hospital and his Assistants for their unfailing interest in the welfare of the nursing department; to the Dean of the Louisiana State University Medical School for his genuine interest and valuable assistance in furthering our university program; to the department heads for their continued cooperation; to the members of the medical staffs of the Tulane and Louisiana State University Medical Schools for their participation in our teaching program; to the residents and all those who have given care to our sick nurses; and, to the members of our nursing staff who have courageously carried their heavy burden during the past year.

SISTER STANISLAUS,

Director, Department of Nursing

SIGNED S. FABREGAS,
Supervisor, Contagious Unit.

REPORT OF DIETARY DEPARTMENT

To the Board of Administrators and Doctor O. P. Daly, Superintendent
Charity Hospital of Louisiana at New Orleans.

Gentlemen:

The Annual Report of the Dietary Department for the fiscal year beginning July 1, 1940 and ending June 30, 1941, is respectfully submitted:

ACTIVITIES

During the year of 1940-1941 the Dietary Department has been striving to perfect the systems set up in the previous year. Accordingly, we have added three dietitians to the staff. The work of the dietitians on the wards has progressed until now they are a much consulted and very necessary part of the ward set-up. The clinic dietitians have also been able to make valuable contributions in behalf of out-patients to whom they render services. Prior to this year, we found it possible to work only in the diabetic clinic; we now cover the obstetrical, medical, and pediatric clinics.

In the administrative section the department has attempted to set up an adequate system of records, a good personnel policy, and a sound wage scale. Although none of these goals has as yet been reached, we feel that definite progress has been made. In spite of many difficulties which presented themselves throughout the year, the department has developed into a smooth-working unit. If the anticipated internship for student dietitians is opened, we believe we are in a position to assume rapidly and with comparative ease heavier responsibilities.

The Formula Room, planned last year, was opened in February. From a standpoint of equipment and efficiency, it is a unit of which the hospital may be proud. There is an average of 780 bottles of formulae prepared daily.

The department served 1,256,711 Personnel Meals and 2,587,044 Patient Meals, of which 355,324 were Special Diets. The total meals served amounted to 3,843,755.

RECOMMENDATIONS

1. Adequate ventilation for the Nurses' Dining Room and Floor Pantries is still greatly needed. Requests for such improvement have frequently been made but, thus far, no action has been taken.

2. A Student Nurses' Laboratory to meet the imperative requirements of the Nursing Board of Education has not yet been provided, although plans have been discussed.

3. An adequate and detailed budget is greatly needed in our department. Satisfactory department records and routines cannot be kept without it. A detailed system of records, based on perfection of purchasing and storage systems is also greatly to be desired. Work is now being done to establish such systems.

4. The establishment of a wage scale to provide a living wage to personnel, and the development of comprehensive personnel policies are strongly to be recommended. Stabilization of personnel is necessary for the smooth running of any department.

5. An internship for dietitians should be established as soon as conditions permit.

6. Space and equipment for a Food Clinic should be provided in the Clinics. This would be a convenience for patients and personnel and would enable the dietitian to better present her clinic material.

7. Proper ice cream making and packaging equipment, if purchased, would make it possible for us to make our own ice cream, thus effecting a considerable saving.

8. Dining room space is very limited, especially in the Graduate Nurses' Dining Room. We recommend that certain groups of employees (not nurses) be given an increase in salary rather than meal allowances. The colored employees' dining room is far too small, and more space should be allotted to this group of employees.

APPRECIATION

We are grateful to our Superintendent, and the Board for their generous efforts in our behalf this past year. Gratitude is also extended to the Doctors, Nurses, and to all Departments for their cooperation, interest and support.

Respectfully submitted,

SISTER EUPHEMIA,

Director, Dietary Department.
